on

Clustering: From the Big Bang to the Current Globalization

by

Anil K. Bera

University of Illinois at Urbana-Champaign (UIUC)

Abstract

We will start with a bang, i.e., the big bang. Then after a short prehistory, we will begin at the beginning of spatial analysis, around mid-18th century. The introduction will be at a general level of epidemiology. Then we will discuss the concept of spatial dependence, and slowly move to spatial statistics, spatial econometrics, and finally to spatial urban economics.

Short Bio

Anil K. Bera is an eminent econometrician, best known for developing Jarque-Bera test of normal distribution in collaboration with Carlos Jarque. Prof. Bera is a post graduate from ISI Kolkata, and completed his doctoral research at Australian National University. He has published extensively and is named in the List of Teachers Rated as Excellent almost every semester he teaches. He received the Economics Graduate Students' Organization (EGSO) Award for Excellence in Graduate Teaching eight times since 1989, the College of Commerce Alumni Association Outstanding Teaching Award for Graduate Teaching in 1991 and Honorable Mention of the Campus Award for Excellence in Graduate and Professional Teaching in 2005.

Date: Tuesday, 15 January 2019 | Time: 2:30 pm – 4:30 pm
Venue: Big Bang Conference Room, T1, 1st Floor
O. P. Jindal Global University, Sonapat-131001, Haryana
